

## **LANGMUIR AWARD FOR EXCELLENCE IN DEVELOPMENT AND STEWARDSHIP**

The Langmuir Award for Excellence in Development and Stewardship recognizes projects that incorporate key elements of Low Impact Development. Low Impact Development is a stormwater management strategy that maintains or restores the natural hydrologic functions of a site to protect the natural resources and water quality of Lake George.

### **The evaluation criteria for the Langmuir Award**

- The project effectively demonstrates the implementation of Low Impact Development through:
  - Conservation of natural resources,
  - Use of natural site features integrated with small scale stormwater controls,
  - Minimizing impacts of land disturbance,
  - Mimicking natural drainage patterns, and/or,
  - Applying a source reduction approach (minimizing impervious cover).
- The project implements environmentally sensitive site planning and design to include:
  - Reducing connectivity of impervious surfaces,
  - Minimizing tree clearing and disturbance,
  - Reducing excavation/cut-and-fill operations,
  - Protecting existing soils, and/or,
  - Maintaining vegetated buffer areas
- The project promotes citizen stewardship and awareness of environmentally sensitive designs.
- The project is located within the Lake George watershed.
- The project meets regulatory requirements with no cited violations.
- The project demonstrates a comprehensive site development plan rather than the implementation of a single stormwater management practice or retrofit, such as a drywell, rain garden and/or vegetative buffer.
- The owner will allow public recognition of the project including press releases and photographs for public education.
